52/1 Bong Sao Street, Ward 5, District 8, Ho Chi Minh City, Vietnam

SUMMARY

Versatile Full-stack Developer with a solid foundation in Computer Science and a product-driven mindset. Experienced in architecting complex systems like **KBMS (4-tier architecture)** and delivering high-impact web solutions (Node.js, .NET, React). Award-winning innovator (**1st Prize - HIU Startup, Hackathon Finalist**) with a proven ability to balance deep technical internals with seamless user experiences and SEO optimization.

EDUCATION

HONG BANG INTERNATIONAL UNIVERSITY Sep, 2022 - Apr, 2026

BACHELOR OF COMPUTER SCIENCE

Major: Artificial Intelligence & Software Development | **GPA:** 2.8/4.0
Relevant Coursework (Points): Web Application Development (9.4), Introduction to Programming (9.8), Advanced Artificial Intelligence (9.3),Graph Theory (9.1), Introduction to Artificial Intelligence (8.4), Information Security (8.1), Programming Techniques (8.0), Python Programming (8.0)

TECHNICAL STACKS

Programming Languages: JavaScript (ES6+), TypeScript, C#
Frontend: ReactJS, React Native, Next.js, HTML5, CSS3, Tailwind CSS, Material UI, Native Base
Backend: Express.js, NextJs, ASP.NET Core, Entity Framework Core (EF Core)
Databases & Infrastructure: MongoDB, MySQL, SQL Server, Redis, RabbitMQ
DevOps & Deployment: Git, GitHub, Nginx, Linux Server, GitHub Actions (CI/CD), Docker
Soft skills: Problem Solving, Team Collaboration, Result-oriented Leadership, Time Management, Fast Learning & Adaptability

EXPERIENCE

Sen Viet Co., Ltd Sep, 2025 - Nov, 2025

Full-Stack Developer Intern

- Developed an **IT Asset Management System** using **Node.js, React, and MongoDB**.
- Built **RESTful APIs** and responsive UI for asset tracking and maintenance workflows.
- Implemented **JWT authentication** and automated scheduling features.
- Wrote tests and used **Docker** for consistent development and deployment.

PROJECTS

Knowledge Base Management System (KBMS) — COKB-based Reasoning Engine | Capstone Project Sep, 2025 - Apr, 2026

Full-stack Developer

- **System Architecture:** Engineered a **4-tier RDBMS-like architecture** (.NET 8) supporting the **COKB formal model**, managing complex entities including Concepts, Relations, and Rules.
- **Query & Execution Engine:** Developed a full compiler pipeline (**Lexer, Parser, AST**) for **KBQL** (custom SQL-like language), supporting **20+ commands** for DDL/DML and automated reasoning.
- **Storage Engine:** Implemented a high-performance binary storage layer with **B+ Tree indexing** and **Write-Ahead Logging (WAL)**, ensuring **O(log n)** search complexity and **100% data atomicity**.
- **Automated Reasoning:** Built an inference engine using **FClosure matrix algorithms** and numerical solvers (**Newton-Raphson**), capable of solving non-linear 2D equations with **10+ variables**.
- **Security & Explainability:** Integrated **TCP/IP-based RBAC** for secure multi-user access and developed **Derivation Tracing** to provide step-by-step logic explanations for **100% transparency**.

ANH GIA TATTOO WEB — Anh Gia Tattoo Studio | Personal Project Dec, 2025 - Jan, 2026

Freelance Full-Stack Developer

- **SEO & Growth:** Developed an SEO-optimized website, achieving **100+ daily organic visits** within the first month and generating **100+ high-potential leads** through optimized search rankings.
- **Performance Marketing:** Integrated **Google Ads & Google Analytics** to track user engagement, resulting in a data-driven marketing strategy that increased brand visibility for **anhgiatattoo.com**.
- **System Security:** Implemented robust anti-spam mechanisms, including **rate limiting and IP blocking**, ensuring a **100% secure** booking and customer request environment.
- **Content Management:** Built a custom Admin Panel for seamless content updates and automated email notifications, reducing manual administrative tasks by **approx. 50%**.
- **Data Tracking:** Designed a tracking system using **SQL Stored Procedures** to generate daily engagement statistics and monitor conversion funnels.

IT ASSET MANAGEMENT SYSTEM — Sen Viet Co., Ltd | Personal Project Sep, 2025 - Nov, 2025

Full-Stack Developer Intern

- **Process Automation:** Developed an automated maintenance scheduling and notification system, reducing manual tracking effort by **40%** and ensuring **zero missed maintenance cycles**.
- **System Architecture:** Designed and implemented **RESTful APIs** (Node.js/Express) to manage **500+ assets**, supporting end-to-end workflows from allocation to maintenance.
- **Security:** Engineered a secure authentication layer using **JWT with Refresh Tokens**, achieving a scalable session management system with **100% secure access control**.
- **Frontend Efficiency:** Built a responsive dashboard using **React & Redux Toolkit**, improving data entry speed by **30%** through optimized state management and UX design.
- **Data Integrity:** Migrated asset tracking from manual spreadsheets to a centralized database, eliminating **95% of data redundancy** and tracking errors.

AWARDS & ACHIEVEMENTS

- **HIU Startup Competition:** Innovative healthy snack startup project focusing on nutritional value and market potential – **First Prize**
- **AI-based Efficiency Improvement Contest (BOSCH):** AI-integrated smart scale solution for automated warehouse inventory and mechanical inspection – **Consolation Prize**
- **BUIDL Vietnam Hackathon:** Blockchain-based digital music rights management system using Smart Contracts and decentralized storage – **Consolation Prize**

LANGUAGES

English: Intermediate (VSTEP B1) – Proficient in technical documentation and research. — **Vietnamese:** Native
